● Previous Years' Solved Papers

1. Discrete Structures and Optimization	3–72
Mathematical Logic	3
Predicate Logic	4
Propositional Equivalences	4
Normal Forms	5
Predicates	5
Quantifiers	6
Nested Quantifiers	6
Rules of Inference	6
Set Operations	6
Relations	7
Partial Orderings	10
Counting, Mathematical Induction and Discrete Probability	11
Pigeonhole Principle	11
Permutations and Combinations	11
Permutations with Repetitions	13
Combinations	13
The Inclusion-Exclusion Principle	15
Mathematical Induction	16
Probability	16
Group Theory	17
Subgroups	21
Quotient Group	22
Isomorphism of Groups	23
Homomorphisms of Groups	24
Automorphism of a Group	25
Rings	25
Integral Domains, Fields, Division Rings	26
Integral Domains	27
Fields	27
Applications of Group Theory	28
Graph Theory	29
Simple Graph	29
Multigraph	30
Weighted Graph	30
Paths and Circuits	30
Shortest Paths in Weighted Graph	30
Shortest Path Algorithm	31
Eulerian and Hamiltonian Graph	31
Planner Graph	31
Graph Theory - Coloring	31
Trees	32
Prefix Codes	33
Tree Traversals	33

Spanning Trees	34
Boolean Algebra.....	35
Boolean Functions and Truth Tables.....	36
Simplification of Boolean Functions	39
Optimization	42
Linear Programming – Graphical Solution.....	43
Simplex Method.....	44
Dual Simplex Method.....	45
Sensitivity Analysis Linear Programming Simplex Method	46
PERT/CPM	48
CPM	51
Critical Path Calculations and Resource Levelling	52
● Objective Questions	53
2. Computer System Architecture.....	73–122
Digital Logic Circuits and Components	73
Digital Computers.....	74
Logic Gates	74
Combinational Logic Design	77
Karnaugh MAP Simplification.....	78
Combinational Circuits	79
Flip-Flops.....	80
Sequential Circuits.....	81
Multiplexer.....	81
Asynchronous Counter.....	83
Hardwired Central Unit.....	84
Data Representation	84
Number Systems and Conversion.....	84
One's Complement Representation.....	85
Two's Complement Representation	85
Complement's Arithmetic (Signed)	87
Fixed-Point Representation.....	88
Floating Point Representation.....	88
Error Detection & Correction	89
Register Transfer and Micro-Operations	89
Bus and Memory Transfers.....	89
Basic Computer Organization and Design.....	89
Stored Program Organisation.....	90
Timing and Control.....	91
Instruction Cycle.....	91
Memory-Reference Instructions	92
I/O (Input/Output).....	93
Interrupt.....	94
Programming the Basic Computer.....	94
Categories of Languages.....	95
1. Machine Language.....	95
2. Assembly Language.....	95
Assembler	95
Elements of a Programming Language.....	96
Microprogrammed Control	96
Central Processing Unit (CPU).....	97
Stack Based CPU Organization	97
Instruction Format.....	97
Addressing Modes	97
RISC and CISC	97
Pipeline and Vector Processing.....	98
Pipelining.....	98

Vector Processor Classification	98
Array Processors	99
Input-Output Organization	99
I/O Interface (Interrupt and DMA Mode)	99
Mode of Transfer	100
Asynchronous Serial Data Transfer	100
Serial Communication	100
Memory Hierarchy	100
Main Memory	100
Auxiliary Memory, Associative Memory	101
Cache Memory	102
Multiprocessors	103
Interconnection Structures	104
Interprocessor Arbitration	104
Inter Process Communication	105
Synchronization in Interprocess Communication	105
● Objective Questions	106
3. Programming Language and Computer Graphics.....	123–211
Programming Language Concepts	123
Paradigms and Models	124
Computer Programming – Environment	126
Programming Language Syntax	127
Stages in Translation	128
Elementary Data Types Properties of Types and Objects	128
Scalar and Composite Data Types	128
Programming in C	129
C Tokens	129
Identifiers	130
Data Types in C	130
Primary Data Types	130
Sequence Control	131
Control Over Subprograms	131
Arrays	131
Structures and Unions	132
String	132
Pointer	133
Functions	134
Global Structure	134
Argument Passing	135
Basics of File Handling in C	135
Command Line Arguments In C/C+ +	136
Preprocessors	136
Object Oriented Programming Concepts	136
Object	138
Instantiation	138
Inheritance	138
Encapsulation	140
Abstract Classes in C+ +	140
Polymorphism	140
Programming in C+ +	141
Enumerated Data Type	142
Variables	143
Constants	144
Operator	144
Control Statements	145
Functions Parameter Passing	145

Virtual Function in C++	146
Class	146
Arrays of Class Objects	147
Constructors and Destructors	149
Overloading Constructor with Array of Class Objects	151
Overloading in C++	152
Templates	152
Function Templates	152
Exception Handling	153
Special Exception Handling Functions	155
Event Handling in Native C++	156
C++ Files and Streams	157
Multifile Program in C	157
HTML	158
DHTML	162
XML	163
Scripting	165
Java	166
Servlet	169
Applets	172
Computer Graphics	178
Display System : Video Device Information	179
Display Technology	180
Multi-Scanning Monitors	181
Raster Displays	184
Input Device	185
Line Generation Algorithm	186
Midpoint Ellipse Drawing Algorithm	187
Scan-Line Polygon Filling Using Open in C	187
Boundary Fill Algorithm	187
Flood Fill Algorithm	188
2D Geometrical Transformations	188
Translation	188
Rotation	188
Scaling	188
Reflection	188
Shear	188
2D Transformations	189
2D Rotation	189
Composition of Transformations	190
Viewing in 3D	191
Geometric Modelling	191
Polygon Surfaces	192
Computer Graphics Curves	192
Bezier Curves	193
Polygon	193
Viewing & Clipping	194
● Objective Questions	194
4. Database Management Systems	212–260
Traditional File Oriented Approach	212
The Database Approach	213
Advantages and Disadvantages of Database Management System	214
Database Models and their Implementation	215
DBMS Components and Architecture	216
External Level or Subschema	218
Mapping Between Different Levels	218

Entity-Relationship (E-R) Model.....	218
Relationship Between Entity Sets.....	219
Advantages and Disadvantages of Relational Approach.....	222
Concepts of a Relational Model.....	224
The Relational Algebra.....	224
SQL.....	225
The Data Definition Statements.....	226
Select Delete Insert Update.....	226
Data Manipulation.....	228
Data Definition Facilities.....	228
Normalization.....	230
Functional Dependency.....	230
Anomalies in a Database.....	231
Decomposition.....	231
Properties of Normalised Relations.....	232
Query Processing.....	236
Transactions.....	237
Concurrency.....	237
Schedules and Recovery.....	237
Distributed Databases.....	239
Object Oriented Model.....	241
Promises of Object Oriented Systems.....	243
Data Warehousing.....	246
Data Mining vs. Data Warehousing.....	246
Data Mining.....	247
Big Data Systems.....	248
● Objective Questions.....	252
5. System Software and Operating System.....	261–344
System Software.....	261
Assembly Language.....	261
Compilation and Compilers.....	262
Loading.....	264
Linking.....	265
Relocation.....	265
Macros.....	265
Debuggers.....	266
Operating System.....	267
System Calls.....	267
Evolution of Operating System.....	268
Multiprogramming.....	270
Operating System Structure.....	270
Process Management.....	271
Process Concept.....	271
Process Implementation.....	272
Processor Scheduling.....	272
Scheduling Algorithms.....	274
Basic Concepts of Inter-process Communication and Synchronization.....	276
Semaphores.....	276
Multiprogramming with Fixed Partition.....	279
Multiprogramming with Dynamic Partitions.....	281
CPU Scheduling.....	282
Scheduling.....	282
Scheduling Criteria.....	283
Scheduling Algorithms.....	283
Banker's Algorithm for Deadlock Handling.....	284
Deadlocks.....	285

Memory Management.....	287
Swapping.....	288
Paging	288
Segmentation.....	290
Demand Paging.....	292
Storage Management	292
Disk Organisation	295
Disk Space Management Methods.....	295
Disk Scheduling	298
File Protection.....	299
Data Organization	301
File Operations.....	302
File System.....	304
File Structure.....	306
Network Security	307
Cryptography	311
Parallel Virtual Machine (PVM).....	311
Data Virtualization	312
Unix Operating System.....	312
Text Processing	313
File Monitoring.....	315
Multiprocessing Operating System.....	319
Distributed Operating System.....	322
The Kernel	323
System Management Components.....	323
Distributed Computing Models.....	324
● Objective Questions	325
6. Software Engineering.....	345–399
Software Engineering.....	345
Software Process	345
System Development Life Cycle (SDLC)	346
Software Development Modes.....	347
Software Development Process	350
Software Project Management.....	351
Quality Function Deployment (QFD).....	351
Guiding Principles Propounded by Davis for ‘Requirements Engineering’	352
Basic Software Requirements	353
Structured Analysis	354
Primary Objectives of the Analysis Model	355
Software Requirements Specification (SRS)	358
Software Design.....	359
Software Design Concepts.....	361
Use of ‘Information Hiding’ as a Design Criteria for Modular Systems.....	362
Functional Independence	363
Cohesion	363
Coupling.....	363
User Interface Design	369
Role of Quality in Software Development.....	369
Software Quality Factors	370
Software Quality Assurance.....	371
Intermediate COCOMO.....	374
Software Testing	376
Software Maintenance	377
Deriving Test Cases	382
Black Box Testing.....	382
Testing Strategies	384

Alpha and Beta Testing	386
Software Configuration Management	387
Clean Room Software Engineering	388
Software Re-engineering	388
● Objective Questions	389
7. Date Structures and Algorithms.....	400–457
Data & File Structure	400
Arrays.....	404
Stacks	405
ADT of Stacks.....	406
ADT of Queues	409
Queue Implementations	409
Other Types of Queue	411
Priority Queues	412
Linked Lists	413
Static and Dynamic Memory Allocation.....	414
Basic List Operations	417
Other Types of Linked Lists.....	420
Trees.....	421
Binary Trees	423
Graphs	426
ADT of Graph	428
Sorting.....	429
Divide and Conquer Methods	433
Searching Techniques	435
Reordering a List for Maximum Efficiency.....	437
Dynamic Programming.....	439
Backtracking	439
Branch and Bound.....	440
Lower Bound Theory	441
NP-Complete Program.....	441
NP-Naming Convention.....	442
NP-Complete Program.....	442
Definition of NP-Completeness	442
NP-Complete Problems	443
Completeness under Different Types of Reduction	444
Non-Deterministic Algorithm	444
Complexity of Non-Deterministic Algorithm (NDA Algorithm)	444
● Objective Questions	447
8. Theory of Computation and Compilers	458–498
Computations	458
Finite Automata.....	459
Deterministic Finite Automata	459
Non-Deterministic Finite Automata	459
Equivalence of DFA's and NFA's.....	459
Properties of Regular Sets.....	460
Non-Deterministic Finite State Automata (NFA)	462
Context Free Grammars	463
DPDA.....	464
Languages Accepted by a PDA.....	465
PDA and Context-Free Languages.....	466
Parse Trees	467
Bottom up Parsers	468
Reduced Form of a Grammar	469
Deterministic Pushdown Automata.....	469

Recursively Enumerable Sets	471
Enumerating a Language	471
Turing Machine	473
Computing with a Turing Machine	474
Turing Machine as a Computer of Integer Functions	474
Computing a Partial Function with a Turing Machine	475
Variations of Turing Machines Multitape TMS	475
Linear Bounded Automata (LBA)	479
Growth Rates of Functions	480
Asymptotic Analysis of Time and Space	481
NP-Hard Code Generation Problems	484
Topdown Parsers	486
Implementation of Reference Semantics	488
Code Generation	490
Code Optimization	490
● Objective Questions	491
9. Data Communication and Computer Networks	499–562
Data Communication & Transmission	499
Basics of Data Communications	499
Data Transmission Signals	500
Difference Between Analog and Digital Signal	501
Modes of Transmission	501
Types of Data Transmission	501
Methods of Data Transmission	502
Multiplexing	503
Transmission Media	504
Computer Networks	506
Components of a Network	507
Local Area Networks	507
Metropolitan Area Networks	509
Wide Area Networks	510
Wireless Networks	511
Internet	512
Networks Connecting Devices	512
Reference Models	514
The TCP/IP Reference Model	516
Switching Techniques	518
Functions of OSI and TCP/IP Layers	520
TCP/IP Model	521
Polling	524
Virtual Circuits	524
Tunneling	525
Fragmentation	525
Routing	526
Routing Algorithms	527
Congestion Control	528
World Wide Web (WWW)	529
Architecture	529
DNS – The Domain Name System	529
Name Servers	530
Electronic Mail	531
Architecture and Services	531
Network Security	532
Security Policy	533
Cryptography	534
Integrity Mechanisms (Secret Key)	534

Public Key Encryption	535
Authentication with Digital Signatures	535
Mobile Technology	536
GSM	536
CDMA	536
Mobile Computing	537
Mobile Middleware	537
Gateway	537
Mobile IP and Mobile Communication Protocol	538
Mobile Communication Protocol	539
Communication Satellites	539
Low-Earth Orbit Satellites	541
Wireless Geolocation Systems	542
Wireless Transmission	542
Radio Transmission	542
Microwave Transmission	543
Lightwave Transmission	543
Wireless Local Loops	545
Cloud Computing and IoT	546
● Objective Questions	550
10. Artificial Intelligence	563–608
Artificial Intelligence	563
Artificial Intelligence Techniques	563
Artificial Intelligence Programming	564
Understanding of the Artificial Intelligence	564
State Space Representation	565
Algorithm for Solving State-Space Problems	566
Basic Search Techniques	567
Heuristic Search	568
Knowledge Representation and Inference	569
Semantic Nets	570
Frames	571
Scripts	571
Expert System	572
Components of Expert System	573
Levels of Knowledge Representation	574
Planning and Search	575
Planning the Implementation	576
Natural Language Processing	577
Writing a Grammar	578
Grammars in Prolog	580
Parsers	580
Semantics and Pragmatics	581
Multi Agent Systems	582
MAS Features	583
Fuzzy Sets	584
Membership Functions	585
Genetic Algorithms (GA)	588
Artificial Neural Networks	589
Supervised Learning	593
Unsupervised Learning	593
Reinforcement Learning	593
Single Perception	594
Multilayer Perceptron	594
Self Organizing Maps	594
Hopfield Network	595
● Objective Questions	595

General Information

Unit – 1 : Discrete Structures and Optimization

Mathematical Logic : Propositional and Predicate Logic, Propositional Equivalences, Normal Forms, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference.

Sets and Relations : Set Operations, Representation and Properties of Relations, Equivalence Relations, Partially Ordering.

Counting, Mathematical Induction and Discrete Probability : Basics of Counting, Pigeonhole Principle, Permutations and Combinations, Inclusion-Exclusion Principle, Mathematical Induction, Probability, Bayes' Theorem.

Group Theory : Groups, Subgroups, Semi Groups, Product and Quotients of Algebraic Structures, Isomorphism, Homomorphism, Automorphism, Rings, Integral Domains, Fields, Applications of Group Theory.

Graph Theory : Simple Graph, Multigraph, Weighted Graph, Paths and Circuits, Shortest Paths in Weighted Graphs, Eulerian Paths and Circuits, Hamiltonian Paths and Circuits, Planner graph, Graph Coloring, Bipartite Graphs, Trees and Rooted Trees, Prefix Codes, Tree Traversals, Spanning Trees and Cut-Sets.

Boolean Algebra : Boolean Functions and its Representation, Simplifications of Boolean Functions.

Optimization : Linear Programming - Mathematical Model, Graphical Solution, Simplex and Dual Simplex Method, Sensitive Analysis; Integer Programming, Transportation and Assignment Models, PERT-CPM : Diagram Representation, Critical Path Calculations, Resource Levelling, Cost Consideration in Project Scheduling.

Unit – 2 : Computer System Architecture

Digital Logic Circuits and Components : Digital Computers, Logic Gates, Boolean Algebra, Map Simplifications, Combinational Circuits, Flip-Flops, Sequential Circuits, Integrated Circuits, Decoders, Multiplexers, Registers and Counters, Memory Unit.

Data Representation : Data Types, Number Systems and Conversion, Complements, Fixed Point Representation, Floating Point Representation, Error Detection Codes, Computer Arithmetic - Addition, Subtraction, Multiplication and Division Algorithms.

Register Transfer and Microoperations : Register Transfer Language, Bus and Memory Transfers, Arithmetic, Logic and Shift Microoperations.

Basic Computer Organization and Design : Stored Program Organization and Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output, Interrupt.

Programming the Basic Computer : Machine Language, Assembly Language, Assembler, Program Loops, Subroutines, Input-Output Programming.

Microprogrammed Control : Control Memory, Address Sequencing, Design of Control Unit.

Central Processing Unit : General Register Organization, Stack Organization, Instruction Formats, Addressing Modes, RISC Computer, CISC Computer.

Pipeline and Vector Processing : Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, Vector Processing Array Processors.

Input-Output Organization : Peripheral Devices, Input-Output Interface, Asynchronous Data Transfer, Modes of Transfer, Priority Interrupt, DMA, Serial Communication.

Memory Hierarchy : Main Memory, Auxillary Memory, Associative Memory, Cache Memory, Virtual Memory, Memory Management Hardware.

Multiprocessors : Characteristics of Multiprocessors, Interconnection Structures, Interprocessor Arbitration, Interprocessor Communication and Synchronization, Cache Coherence, Multicore Processors.

Unit – 3 : Programming Languages and Computer Graphics

Language Design and Translation Issues : Programming Language Concepts, Paradigms and Models, Programming Environments, Virtual Computers and Binding Times, Programming Language Syntax, Stages in Translation, Formal Transition Models.

Elementary Data Types : Properties of Types and Objects; Scalar and Composite Data Types.

Programming in C : Tokens, Identifiers, Data Types, Sequence Control, Subprogram Control, Arrays, Structures, Union, String, Pointers, Functions, File Handling, Command Line Arguments, Preprocessors.

Object Oriented Programming : Class, Object, Instantiation, Inheritance, Encapsulation, Abstract Class, Polymorphism.

Programming in C++ : Tokens, Identifiers, Variables and Constants; Data types, Operators, Control statements, Functions Parameter Passing, Virtual Functions, Class and Objects; Constructors and Destructors; Overloading, Inheritance, Templates, Exception and Event Handling; Streams and Files; Multifile Programs.

Web Programming : HTML, DHTML, XML, Scripting, Java, Servlets, Applets.

Computer Graphics : Video-Display Devices, Raster-Scan and Random-Scan Systems; Graphics Monitors, Input Devices, Points and Lines; Line Drawing Algorithms, Mid-Point Circle and Ellipse Algorithms; Scan Line Polygon Fill Algorithm, Boundary-Fill and Flood-Fill.

2-D Geometrical Transforms and Viewing : Translation, Scaling, Rotation, Reflection and Shear Transformations; Matrix Representations and Homogeneous Coordinates; Composite Transforms, Transformations Between Coordinate Systems, Viewing Pipeline, Viewing Coordinate Reference Frame, Window to View-Port Coordinate Transformation, Viewing Functions, Line and Polygon Clipping Algorithms.

3-D Object Representation, Geometric Transformations and Viewing : Polygon Surfaces, Quadric Surfaces, Spline Representation, Bezier and B-Spline Curves; Bezier and B-Spline Surfaces; Illumination Models, Polygon Rendering Methods, Viewing Pipeline and Coordinates; General Projection Transforms and Clipping.

Unit – 4 : Database Management Systems

Database System Concepts and Architecture : Data Models, Schemas, and Instances; Three-Schema Architecture and Data Independence; Database Languages and Interfaces; Centralized and Client/Server Architectures for DBMS.

Data Modeling : Entity-Relationship Diagram, Relational Model - Constraints, Languages, Design, and Programming, Relational Database Schemas, Update Operations and Dealing with Constraint Violations; Relational Algebra and Relational Calculus; Codd Rules.

SQL : Data Definition and Data Types; Constraints, Queries, Insert, Delete, and Update Statements; Views, Stored Procedures and Functions; Database Triggers, SQL Injection.

Normalization for Relational Databases : Functional Dependencies and Normalization; Algorithms for Query Processing and Optimization; Transaction Processing, Concurrency Control Techniques, Database Recovery Techniques, Object and Object-Relational Databases; Database Security and Authorization.

Enhanced Data Models : Temporal Database Concepts, Multimedia Databases, Deductive Databases, XML and Internet Databases; Mobile Databases, Geographic Information Systems, Genome Data Management, Distributed Databases and Client-Server Architectures.

Data Warehousing and Data Mining : Data Modeling for Data Warehouses, Concept Hierarchy, OLAP and OLTP; Association Rules, Classification, Clustering, Regression.

Support Vector Machine, K-Nearest Neighbour, Hidden Markov Model, Summarization, Dependency Modeling, Link Analysis, Sequencing Analysis, Social Network Analysis.

Big Data Systems : Big Data Characteristics, Types of Big Data, Big Data Architecture, Introduction to Map-Reduce and Hadoop; Distributed File System, HDFS.

NOSQL : NOSQL and Query Optimization; Different NOSQL Products, Querying and Managing NOSQL; Indexing and Ordering Data Sets; NOSQL in Cloud.

Unit – 5 : System Software and Operating System

System Software : Machine, Assembly and High-Level Languages; Compilers and Interpreters; Loading, Linking and Relocation; Macros, Debuggers.

Basics of Operating Systems : Operating System Structure, Operations and Services; System Calls, Operating-System Design and Implementation; System Boot.

Process Management : Process Scheduling and Operations; Interprocess Communication, Communication in Client–Server Systems, Process Synchronization, Critical-Section Problem, Peterson’s Solution, Semaphores, Synchronization.

Threads : Multicore Programming, Multithreading Models, Thread Libraries, Implicit Threading, Threading Issues.

CPU Scheduling : Scheduling Criteria and Algorithms; Thread Scheduling, Multiple-Processor Scheduling, Real-Time CPU Scheduling.

Deadlocks : Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Avoidance and Detection; Recovery from Deadlock.

Memory Management : Contiguous Memory Allocation, Swapping, Paging, Segmentation, Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Memory-Mapped Files.

Storage Management : Mass-Storage Structure, Disk Structure, Scheduling and Management, RAID Structure.

File and Input/Output Systems : Access Methods, Directory and Disk Structure; File-System Mounting, File Sharing, File-System Structure and Implementation; Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance; Recovery, I/O Hardware, Application I/O Interface, Kernel I/O Subsystem, Transforming I/O Requests to Hardware Operations.

Security : Protection, Access Matrix, Access Control, Revocation of Access Rights, Program Threats, System and Network Threats; Cryptography as a Security Tool, User Authentication, Implementing Security Defenses.

Virtual Machines : Types of Virtual Machines and Implementations; Virtualization.

Linux Operating Systems : Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, File Systems, Input and Output; Interprocess Communication, Network Structure.

Windows Operating Systems : Design Principles, System Components, Terminal Services and Fast User Switching; File System, Networking.

Distributed Systems : Types of Network based Operating Systems, Network Structure, Communication Structure and Protocols; Robustness, Design Issues, Distributed File Systems.

Unit – 6 : Software Engineering

Software Process Models : Software Process, Generic Process Model – Framework Activity, Task Set and Process Patterns; Process Lifecycle, Prescriptive Process Models, Project Management, Component Based Development, Aspect-Oriented Software Development, Formal Methods, Agile Process Models – Extreme Programming (XP), Adaptive Software Development, Scrum, Dynamic System Development Model, Feature Driven Development, Crystal, Web Engineering.

Software Requirements : Functional and Non-Functional Requirements; Eliciting Requirements, Developing Use Cases, Requirement Analysis and Modelling; Requirements Review, Software Requirement and Specification (SRS) Document.

Software Design : Abstraction, Architecture, Patterns, Separation of Concerns, Modularity, Information Hiding, Functional Independence, Cohesion and Coupling; Object-Oriented Design, Data Design, Architectural Design, User Interface Design, Component Level Design.

Software Quality : McCall’s Quality Factors, ISO 9126 Quality Factors, Quality Control, Quality Assurance, Risk Management, Risk Mitigation, Monitoring and Management (RMMM); Software Reliability.

Estimation and Scheduling of Software Projects : Software Sizing, LOC and FP based Estimations; Estimating Cost and Effort; Estimation Models, Constructive Cost Model (COCOMO), Project Scheduling and Staffing; Time-line Charts.

Software Testing : Verification and Validation; Error, Fault, Bug and Failure; Unit and Integration Testing; White-box and Black-box Testing; Basis Path Testing, Control Structure Testing, Deriving Test Cases, Alpha and Beta Testing; Regression Testing, Performance Testing, Stress Testing.

Software Configuration Management : Change Control and Version Control; Software Reuse, Software Re-engineering, Reverse Engineering.

Unit – 7 : Data Structures and Algorithms

Data Structures : Arrays and their Applications; Sparse Matrix, Stacks, Queues, Priority Queues, Linked Lists, Trees, Forest, Binary Tree, Threaded Binary Tree, Binary Search Tree, AVL Tree, B Tree, B+ Tree, B* Tree, Data Structure for Sets, Graphs, Sorting and Searching Algorithms; Hashing.

Performance Analysis of Algorithms and Recurrences : Time and Space Complexities; Asymptotic Notation, Recurrence Relations.

Design Techniques : Divide and Conquer; Dynamic Programming, Greedy Algorithms, Backtracking, Branch and Bound.

Lower Bound Theory : Comparison Trees, Lower Bounds through Reductions.

Graph Algorithms : Breadth-First Search, Depth-First Search, Shortest Paths, Maximum Flow, Minimum Spanning Trees.

Complexity Theory : P and NP Class Problems; NP-completeness and Reducibility.

Selected Topics : Number Theoretic Algorithms, Polynomial Arithmetic, Fast Fourier Transform, String Matching Algorithms.

Advanced Algorithms : Parallel Algorithms for Sorting, Searching and Merging, Approximation Algorithms, Randomized Algorithms.

Unit – 8 : Theory of Computation and Compilers

Theory of Computation : Formal Language, Non-Computational Problems, Diagonal Argument, Russels's Paradox.

Regular Language Models : Deterministic Finite Automaton (DFA), Non-Deterministic Finite Automaton (NFA), Equivalence of DFA and NFA, Regular Languages, Regular Grammars, Regular Expressions, Properties of Regular Language, Pumping Lemma, Non-Regular Languages, Lexical Analysis.

Context Free Language : Pushdown Automaton (PDA), Non-Deterministic Pushdown Automaton (NPDA), Context Free Grammar, Chomsky Normal Form, Greibach Normal Form, Ambiguity, Parse Tree Representation of Derivation Trees, Equivalence of PDA's and Context Free Grammars; Properties of Context Free Language.

Turing Machines (TM) : Standard Turing Machine and its Variations; Universal Turing Machines, Models of Computation and Church-Turing Thesis; Recursive and Recursively-Enumerable Languages; Context-Sensitive Languages, Unrestricted Grammars, Chomsky Hierarchy of Languages, Construction of TM for Simple Problems.

Unsolvable Problems and Computational Complexity : Unsolvable Problem, Halting Problem, Post Correspondence Problem, Unsolvable Problems for Context-Free Languages, Measuring and Classifying Complexity, Tractable and Intractable Problems.

Syntax Analysis : Associativity, Precedence, Grammar Transformations, Top Down Parsing, Recursive Descent Predictive Parsing, LL(1) Parsing, Bottom up Parsing, LR Parser, LALR(1) Parser.

Semantic Analysis : Attribute Grammar, Syntax Directed Definitions, Inherited and Synthesized Attributes; Dependency Graph, Evaluation Order, S-attributed and L-attributed Definitions; Type-Checking.

Run Time System : Storage Organization, Activation Tree, Activation Record, Stack Allocation of Activation Records, Parameter Passing Mechanisms, Symbol Table.

Intermediate Code Generation : Intermediate Representations, Translation of Declarations, Assignments, Control Flow, Boolean Expressions and Procedure Calls.

Code Generation and Code Optimization : Control-flow, Data-flow Analysis, Local Optimization, Global Optimization, Loop Optimization, Peep-Hole Optimization, Instruction Scheduling.

Unit – 9 : Data Communication and Computer Networks

Data Communication : Components of a Data Communication System, Simplex, Half-Duplex and Duplex Modes of Communication; Analog and Digital Signals; Noiseless and Noisy Channels; Bandwidth, Throughput and Latency; Digital and Analog Transmission; Data Encoding and Modulation Techniques; Broadband and Baseband Transmission; Multiplexing, Transmission Media, Transmission Errors, Error Handling Mechanisms.

Computer Networks : Network Topologies, Local Area Networks, Metropolitan Area Networks, Wide Area Network, Wireless Networks, Internet.

Network Models : Layered Architecture, OSI Reference Model and its Protocols; TCP/IP Protocol Suite, Physical, Logical, Port and Specific Addresses; Switching Techniques.

Functions of OSI and TCP/IP Layers : Framing, Error Detection and Correction; Flow and Error Control; Sliding Window Protocol, HDLC, Multiple Access – CSMA/CD, CSMA/CA, Reservation, Polling, Token Passing, FDMA, CDMA, TDMA, Network Devices, Backbone Networks, Virtual LANs.

IPv4 Structure and Address Space; Classful and Classless Addressing; Datagram, Fragmentation and Checksum; IPv6 Packet Format, Mapping Logical to Physical Address (ARP), Direct and Indirect Network Layer Delivery; Routing Algorithms, TCP, UDP and SCTP Protocols; Flow Control, Error Control and Congestion Control in TCP and SCTP.

World Wide Web (WWW) : Uniform Resource Locator (URL), Domain Name Service (DNS), Resolution - Mapping Names to Addresses and Addresses to Names; Electronic Mail Architecture, SMTP, POP and IMAP; TELNET and FTP.

Network Security : Malwares, Cryptography and Steganography; Secret-Key Algorithms, Public-Key Algorithms, Digital Signature, Virtual Private Networks, Firewalls.

Mobile Technology : GSM and CDMA; Services and Architecture of GSM and Mobile Computing; Middleware and Gateway for Mobile Computing; Mobile IP and Mobile Communication Protocol; Communication Satellites, Wireless Networks and Topologies; Cellular Topology, Mobile Adhoc Networks, Wireless Transmission and Wireless LANs; Wireless Geolocation Systems, GPRS and SMS.

Cloud Computing and IoT : SaaS, PaaS, IaaS, Public and Private Cloud; Virtualization, Virtual Server, Cloud Storage, Database Storage, Resource Management, Service Level Agreement, Basics of IoT.

Unit – 10 : Artificial Intelligence (AI)

Approaches to AI : Turing Test and Rational Agent Approaches; State Space Representation of Problems, Heuristic Search Techniques, Game Playing, Min-Max Search, Alpha Beta Cutoff Procedures.

Knowledge Representation : Logic, Semantic Networks, Frames, Rules, Scripts, Conceptual Dependency and Ontologies; Expert Systems, Handling Uncertainty in Knowledge.

Planning : Components of a Planning System, Linear and Non Linear Planning; Goal Stack Planning, Hierarchical Planning, STRIPS, Partial Order Planning.

Natural Language Processing : Grammar and Language; Parsing Techniques, Semantic Analysis and Pragmatics.

Multi Agent Systems : Agents and Objects; Agents and Expert Systems; Generic Structure of Multiagent System, Semantic Web, Agent Communication, Knowledge Sharing using Ontologies, Agent Development Tools.

Fuzzy Sets : Notion of Fuzziness, Membership Functions, Fuzzification and Defuzzification; Operations on Fuzzy Sets, Fuzzy Functions and Linguistic Variables; Fuzzy Relations, Fuzzy Rules and Fuzzy Inference; Fuzzy Control System and Fuzzy Rule Based Systems.

Genetic Algorithms (GA) : Encoding Strategies, Genetic Operators, Fitness Functions and GA Cycle; Problem Solving using GA.

Artificial Neural Networks (ANN) : Supervised, Unsupervised and Reinforcement Learning; Single Perceptron, Multi Layer Perceptron, Self Organizing Maps, Hopfield Network.
